

What is Claimed is:

1. An active water producing method comprising the step of heating purified water that is generated by removing impurities from water, while applying a high voltage to the purified water.
2. The active water producing method according to Claim 1, wherein the voltage applied to the purified water is 100 V to 50000 V.
3. The active water producing method according to Claim 1, wherein the purified water is heated to not less than 45 °C and not more than 100 °C.
4. The active water producing method according to Claim 2, wherein the purified water is heated to not less than 45 °C and not more than 100 °C.
5. An active water producing apparatus comprising:
 - a tank for storing purified water generated by removing impurities from water;
 - a high potential generator for applying a voltage between an inside and an outside of the tank; and
 - a heater for heating the purified water in the tank.
6. The active water producing apparatus according to Claim 5, wherein the high potential generator outputs a voltage of 100 V to 50000 V.
7. The active water producing apparatus according to Claim 5, wherein the heater is set to heat the purified water to not less than 45 °C and not more than 100 °C.

8. The active water producing apparatus according to Claim 6, wherein the heater is set to heat the purified water to not less than 45 °C and not more than 100 °C.
